

# The LifeGuard Mia BT4

The emergency transmitter  
that works with both your  
in-home and mobile alarm

## Mia is a dual RF & Bluetooth Transmitter

It's a small, wireless help button you can wear on your wrist or as a pendant around your neck, and it works with the LifeGuard SmartHome IPD, SmartHome LGX and L-Series in-home alarm systems, as well as the LifeGuard SmartMobile app. This means when an emergency arises, just one simple button allows the user to summon help whether inside or outside the home.

Those using the LifeGuard SmartMobile app can trigger an alarm without touching their phone (within Bluetooth range). The Mia BT4 can send an alarm and GPS location to our emergency response centre immediately. This extra level of protection allows SmartHome ecosystem users protection through LifeGuard's 24/7 monitoring inside the home as well as when away from home.

## Emergency response by healthcare professionals

That's exclusive to INS LifeGuard and it's an important distinction. Emergency personnel are engaged quickly if required, and our staff can not only share personal details but also medical information that could save a life.
